### DETAILED ACTION

Claims 1-92-100 are pending.

#### Restriction:-

In paper mailed 7/26/04, examiner did a restriction and applicants responded electing group I, without traverse.

The elected group I was as follows.

- I. Claim 1 in part, drawn to a compound of formula A wherein R1 is an aryl, R2 is ROalkyl or (R)2N-alkyl, R (S)-alkyl, (R)2Ncycloalkyl, (R)2N cycloalkyl or RS-cycloalkyl, R3 and R4 are H, alkyl or F or -OR, (R is a non hetero ring R5 is a phenyl or a thiophene classified in class 546 and various subclasses.

In paper mailed 11/2004 examiner cited art and applicants amended the R1 to be a six-membered aromatic ring without any hetero atoms. R5 was amended to include substituted phenyl.

Claims 92 and its dependent claims were not amended to the elected group. R5 still recites carbocyclic aryl group optionally substituted.

Applicants are required to amend the claims to the restricted group.

In their response mailed 12/1/2005 applicants deleted the some of the non-elected subject matter and have also amended the claims to overcome some of the art rejection.

Applicants claims are broad . a preliminary search gives numerous iterations see below

and hence new grounds of rejection follows.

The Rejection of claims 1 and 92 over DeGraw et al 1967 has been withdrawn since applicants have amended the claims and deleted the R being an alky-N group.

The rejection of claims 1 and 92 over Rehse et al DN 91:168231 has also been withdrawn partially since applicants have amended the claims to delete the (R)2Nalkyl.

However the 102 rejection of claims 1 and 92 over Rehse et al 1986 DN 106:18327 has been changed to a 103 since applicants have just changed the "n" from 0-2 to 0 and 1.

A difference of one -CH<sub>2</sub> -, make a compound a homolog and homologs are considered to be prima facie obvious variants. Compounds that differ in just one methylene group are considered homologs and are generally considered not patentable in the absence of unexpected results. A person of skill in the art would be motivated to prepare the homologs with slight variation in substitution because of close structural relationship.(see In re Ruddy 121 USPQ 427.).
